

**ACO FULBORA** manufactures a range of floor drainage for internal areas, as well as an array of rainwater outlets for external areas such as flat roofs. Fulbora's products are made from a variety of metals including stainless steel, galvanised steel, LM6 aluminium, gun metal and nickel bronze.

### *Stainless Steel Channel Drainage*

ACO Fulbora's channel drainage range consists of channels, gratings and gullies. Manufactured in austenitic stainless steel the range provides a choice of hygienic, corrosion-resistant systems. For use in:

- Hospitals
- Kitchens
- Abattoirs
- Food and Drink Industry

Stainless Steel Channel Drainage

### *Internal Floor Drainage*

This range consists of LM6 aluminium trapped and untrapped floor drains and stainless steel gullies. The gullies can be used as 'free-standing' floor drains or in combination with any of the ACO Fulbora channel systems. Applications include:

- Plant rooms
- Kitchens
- Showers
- Wash areas

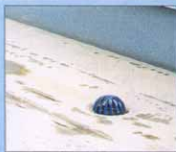

Internal Floor Drainage

### *Roof Drains*

ACO Fulbora rainwater outlets provide watertight drainage for flat roofs and other areas. ACO Fulbora rainwater outlets are manufactured in LM6 aluminium or gun-metal and feature a dome grating to deter blockages. Suitable for:

- Flat roofs
- Balconies
- Raised walkways
- Gutters

Roof Drains

### *Grease Traps and Petrol/Oil Interceptors*

Made from polymer concrete the ACO Grease Trap is one of the most technically advanced grease traps available today. The range overcomes the problems of substances blocking the drainage system or polluting the waterways by separating grease, oils and fats from the drainage water. Suitable for:

- Kitchens and food production areas
- Oil and water separation
- Sediment catchment

Grease Traps and Petrol/Oil Interceptors
